·		/CESAR B PAULA Primary Examiner Art Unit: 2178	1

Continuation of 11. does NOT place the application in condition for allowance because: The Examiner disagrees with Applicant's submission indicating that the invention described by Thacker would be unnecessarily complicated, since the constraints of a display device would be known prior to any deconstruction of the image (page 2, parag.2). The constraints of the device would not be necessary, Thacker's invention takes any document, regardless the size, and distills or customizes it to fit any device, tablet pc, pda, etc. (col.6, lines 1-30).

Moreover, the Applicant remarks that Thacker does not support the deconstructing of the document, and synthesizing into an intermediate structure (page 3, parag.1). Although, Thacker fails to explicitly teach the above limitations, Balabanovic indicates that the segmenting of image documents is used in ocr applications (col.5, lines 50-67). It would have been obvious to one of ordinary skill in the art to utilize the technique of Balabanovic to convert the image into text segments, which would be more flexible and manageable in allowing a user to fit an a document into an arbitrary device. Balabanovic also teaches the quick and easy commication of documents to a user (col.1, lines 7-10).

It is believed that the combination of Thacker, and Balabanovic is proper for at least the remarks included above.
